

NBT Trade Paints have been formulated to NBT's own specification and are manufactured in the UK. They have been specifically designed to tackle the most difficult environmental and health issues arising from paints - such as toxicity, VOCs, embodied energy, carbon emissions, resource use and pollution - and yet they maintain the highest performance standards of modern paints, with conventional ease of use, in a cost effective way.

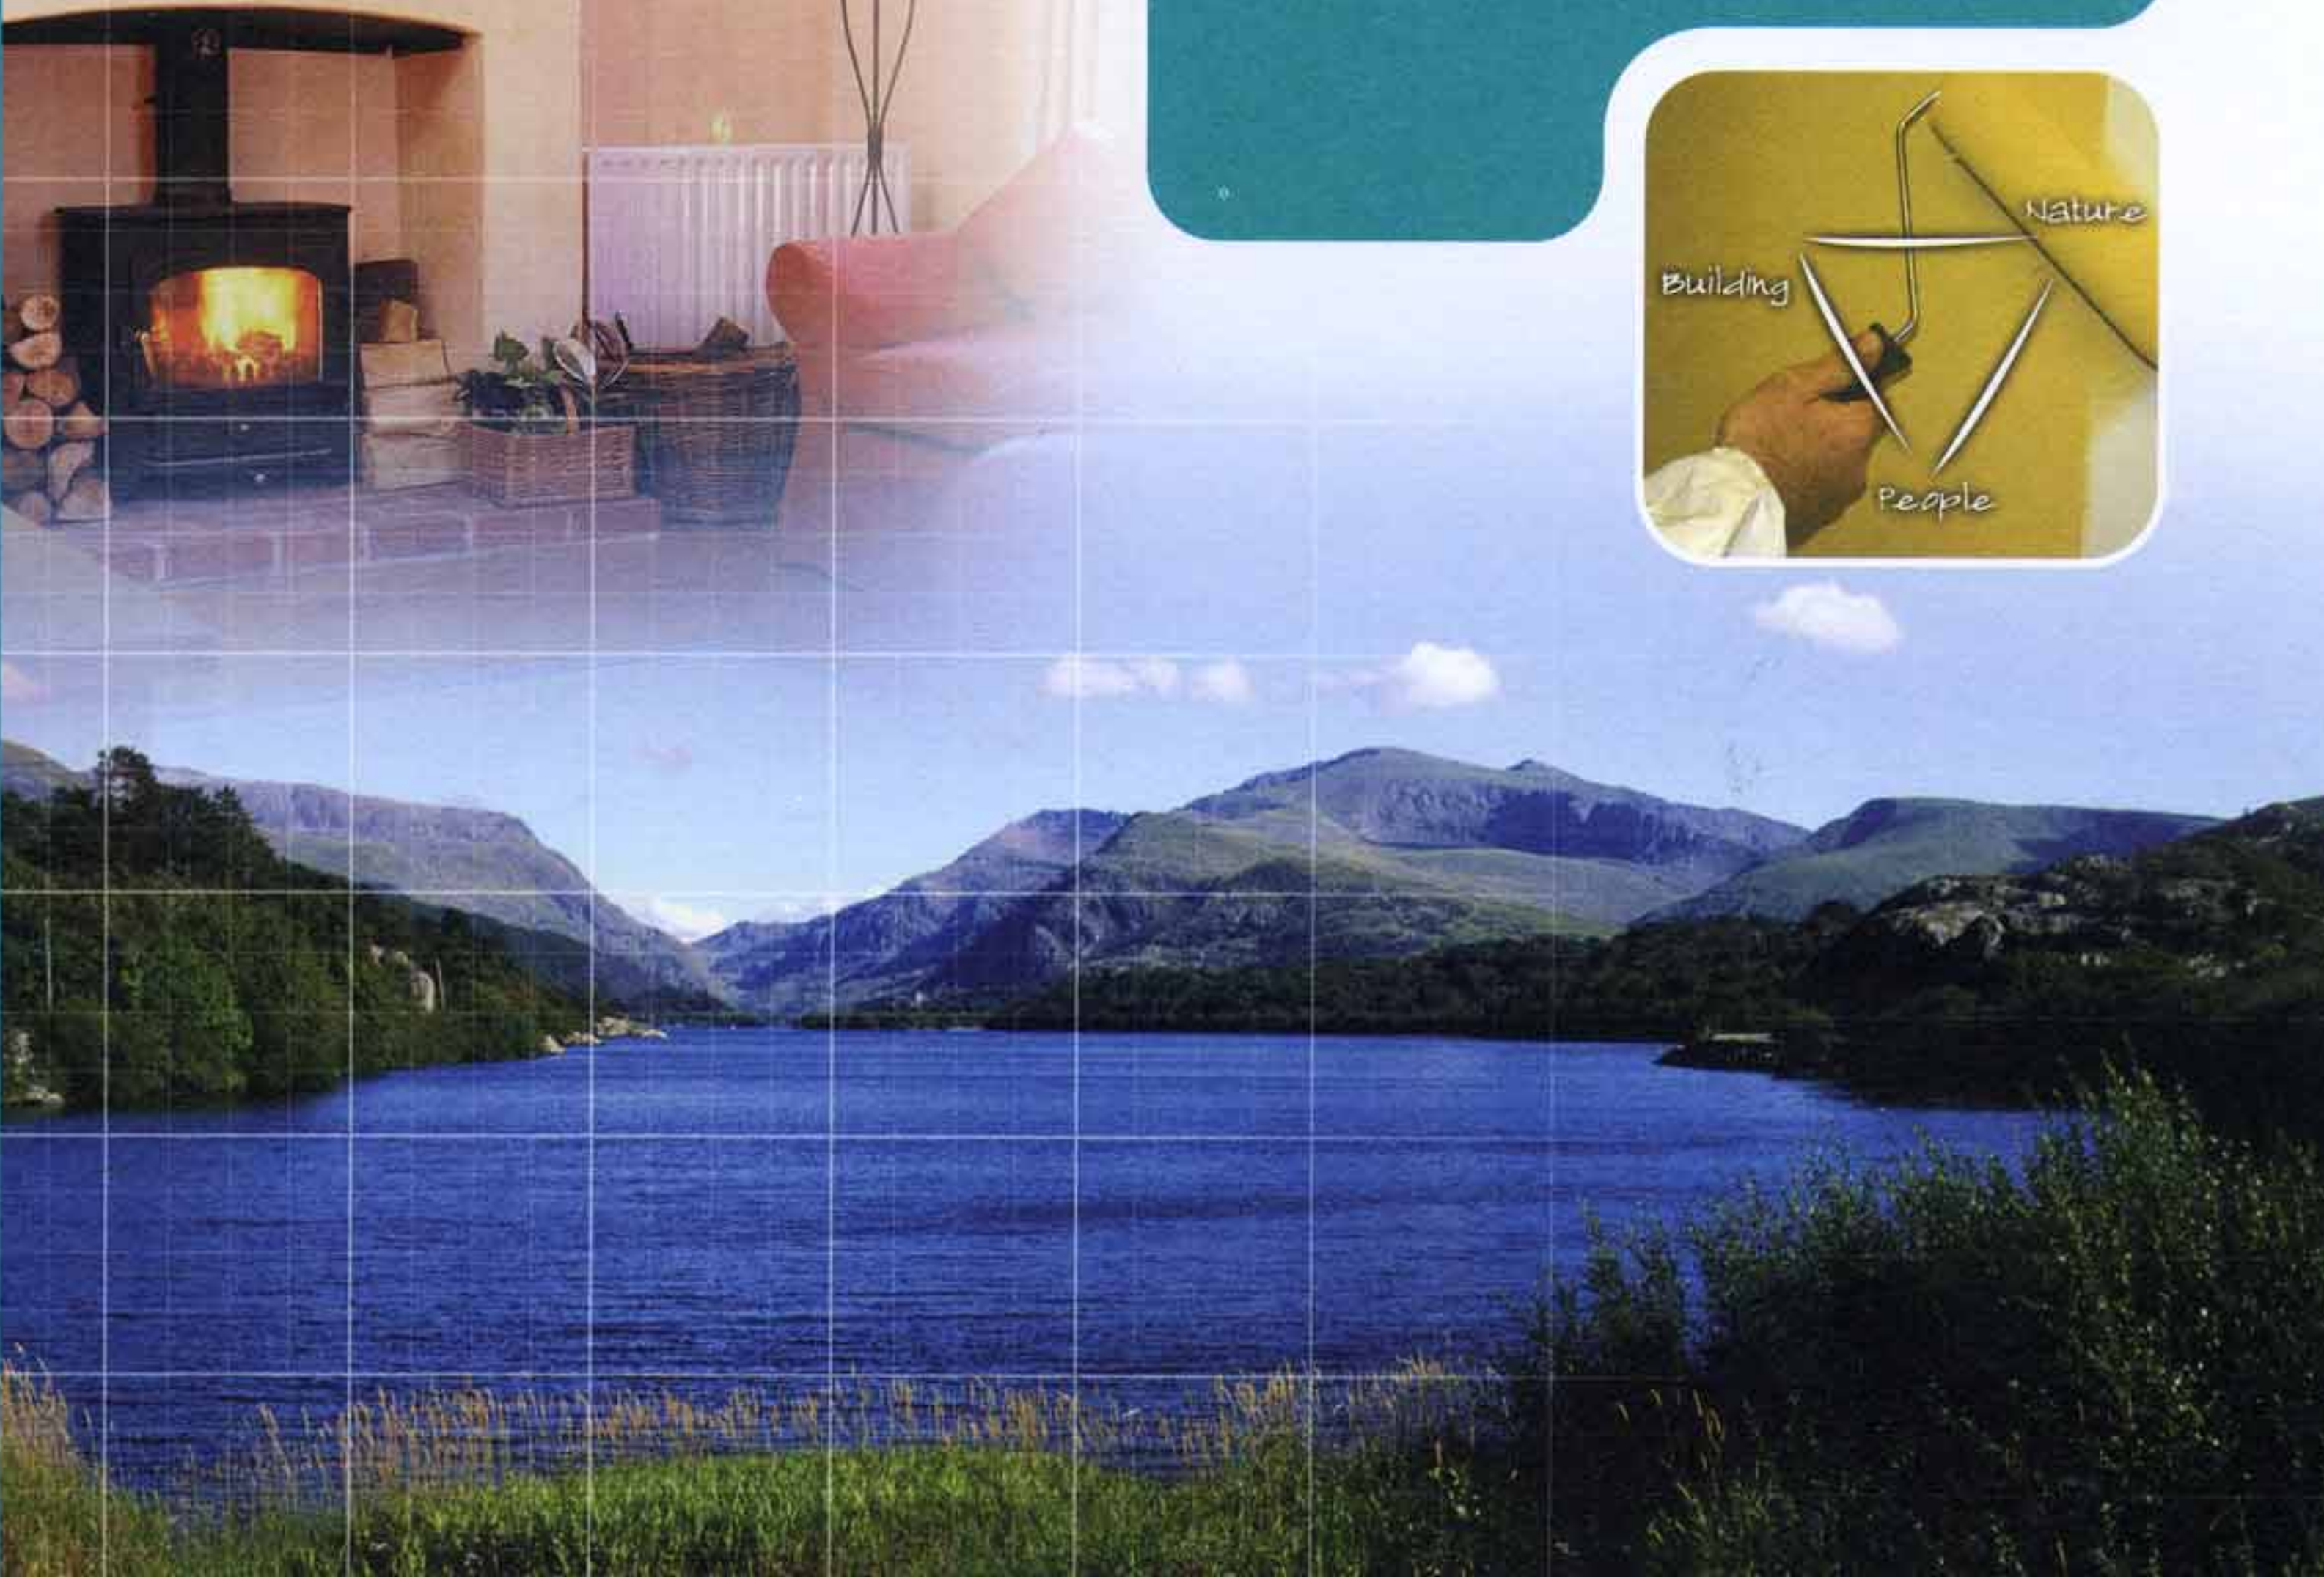

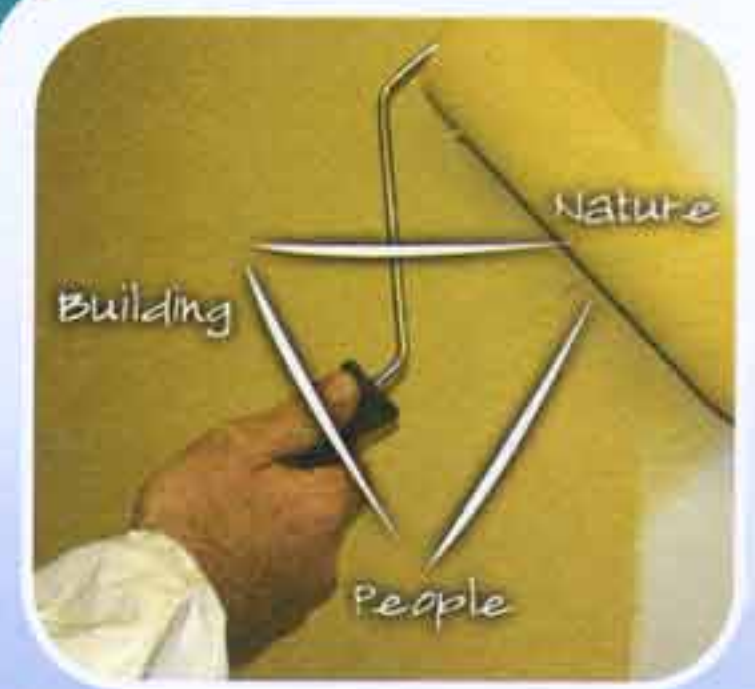

NBT Trade Paints are:

- Cost effective
- Easy to use
- High performance
- Environmentally friendly
- Non-toxic
- Manufactured in the UK

A mainstream environmental product

NBT's trade paint formulations are a significant step forward for health and the environment. By focussing on issues of greatest impact NBT has significantly reduced synthetic and hazardous materials, replacing these with high performance low impact alternatives. As a result NBT's trade white emulsions now contain:

- Virtually zero VOCs (0.01%)
- No Solvents
- No hormone mimics
- Considerably reduced resins and TiO_2
- No chlorinated preservatives
- Over 30% less embodied energy

NBT Trade Paints – Colours
